

Copilot

Sure! Here's a simple example of how you can create a JavaScript program to add two numbers in an HTML file:

```
<!DOCTYPE html>
<html>
<head>
  <title>Add Two Numbers</title>
  <script>
    function addNumbers() {
      // Get the values from the input fields
      var num1 = parseInt(document.getElementById("num1").value);
      var num2 = parseInt(document.getElementById("num2").value);

      // Calculate the sum
      var sum = num1 + num2;

      // Display the result
      document.getElementById("result").innerHTML = "Sum: " + sum;
    }
  </script>
</head>
<body>
  <h2>Add Two Numbers</h2>
  <input type="number" id="num1" placeholder="Enter first number">
  <input type="number" id="num2" placeholder="Enter second number">
  <button onclick="addNumbers()">Add</button>
  <p id="result"></p>
</body>
</html>
```

In this example:

1. The HTML part includes two input fields for the numbers, a button to trigger the addition, and a paragraph to display the result.
2. The JavaScript part defines a function `addNumbers()` that retrieves the values from the input fields, calculates their sum, and displays the result in the paragraph.

Feel free to copy this code into an HTML file and open it in your browser to see it in action! If you have any questions or need further assistance, just let me know.
